1. Applicant's election of Group I, claims 1, 28, 38, 46, 51, 71, and 76-79 in the reply filed on April 2, 2008 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Claims 60 and 80 are withdrawn from consideration as directed to a non-elected invention.

2. Claim 77 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In line 4 of this claim, it appears that text is missing between "not more than" and "by weight". Based on page 11, line 1 of the specification, it appears that "85%" should be inserted in the claim, and the claim is being read as such for purposes of examination.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1, 28, 38, 46, 51, 71, and 76-79 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-26 of U.S. Patent No. 7,041,150.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant claims and the '150 claims are directed to a method for producing a powder of a material such as an alloy of titanium by reacting chlorides of the alloy desired with a flowing stream of liquid alkali metal (such as liquid sodium or magnesium) to cause an exothermic reduction of the halide vapor. According to claims 7 and 21 of the '150 patent, the alkali metal is present in excess of the stoichiometric amount, as required by the instant claims.

The '150 claims do not state that the reaction generates sufficient heat such that substantially all the excess alkali metal is vaporized, as required by the instant claims. However, because the actual reactants used as well as the reaction conditions in both the instant claims and the '150 claims are substantially the same, it is a reasonable assumption that the exothermic reaction of the '150 claims would generate substantially the same amount of heat as that of the instant claims, thereby resulting in the same effects such as vaporizing of any excess liquid alkali metal.

Thus, no patentable distinction is seen between the process as presently claimed and that as recited in the claims of the '150 patent.
